

BEEF

SIRES 2020-21

INTERACTIVE EDITION

Philip Halhead
Semex beef specialist
and UK dairy farmer
07949 733747

Semex has a beef team dedicated to providing the genetics most suitable for UK dairy farmers, supply chain partners and, ultimately, consumers.

Philip Halhead, over the last 20 years, has focused on beef genetics with specific CALVING EASE attributes and CALF VALUE to maximise the returns for you, the dairy farmer.

Along with herds assigned to collecting data, Norbreck Genetics owns a 300 cow dairy herd in which they monitor closely the latest beef genetics and their suitability for crossing with dairy cows.

Semex priority is on fertility, calving ease and short gestation lengths combined with fast growth rates that allows BEEF on DAIRY to contribute to every modern dairy farm.

Working with partners in the supply chain to keep ahead of what the market demands, the collection of DATA is the future focus for the Semex team to ensure maximum value is achieved when using Semex beef.

The latest independent data from the AHDB/BCMS carcass traits project has returned Goodyhills Emperor as the Number 1 (semen available) British Blue bull from a huge data set on AVERAGE DAILY CARCASS GAIN (fast growth).

Philip is happy to help or advise any farmer on sire or breed choice.

Talk to our team today about superior beef sires at competitive prices.

KEY TO SYMBOLS

Calving Ease

Fewer difficult births reducing issues at calving and breeding time.

Carcase Weight

Increased profit from sires who will increase the Carcase weight and volume of product produced per animal.

Marbling

Sires that will increase marbling which increases the quality of meat produced.

Meadow Quality Approved

Improve calf quality and saleability. Ease of calving and greater growth potential.

Gold Standard

Bulls that produce superior calves combining calving ease with high value.

Beef Yield

Delivers dairy producers a product that is a combination of calving ease, high retail beef yield and good growth.

THE BEEF CARCASS TRAIT PROJECT

The Beef Carcass Traits Project, funded by AHDB and HCC, uses data derived from the British Cattle Movement Service (BCMS), abattoirs and breed societies to produce EBVs for traits of economic importance to commercial beef producers. A bull's EBVs give you a good idea of the genetic potential that will be passed on to his calves and should be taken into consideration when choosing sires.

Since 2018, carcass trait EBVs have been produced on a quarterly basis by SRUC/EGENES from a dataset of over seven million carcass records.

HOW TO READ THE CHARTS

This Carcass Traits chart shows EBVs as horizontal red bars. Bars to the right of centre indicate fewer days to slaughter, heavier carcasses, superior conformation, fatter carcasses, and greater carcass growth.

■ Days to slaughter

EBV predicting days to slaughter at a given weight and fat class. Units: Days.

■ Carcass weight

EBV predicting carcass weight at a given slaughter age. Units: Kilogrammes (kgs).

■ Carcass conformation

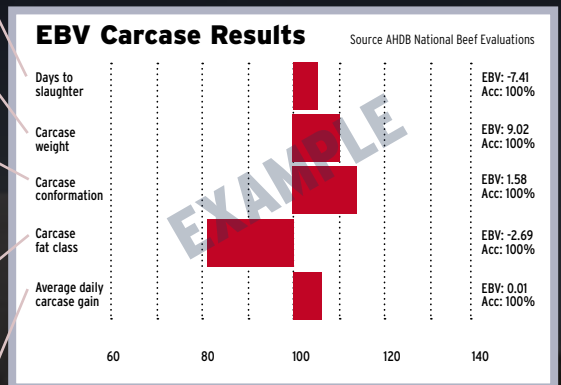

EBV predicting carcass conformation at a given slaughter age, using records of carcass conformation based on the EUROP grid. Units: Values derived from conformation scores.

■ Fat class

EBV predicting carcass fat class at a given slaughter age, using values based on the EUROP classification system, where 1 is leanest and 5H is fattest. Units: Values derived from fat class scores.

■ Average daily carcass gain (ADCG)

EBV predicting lifetime daily carcass gain. Units: Kilogrammes/day.

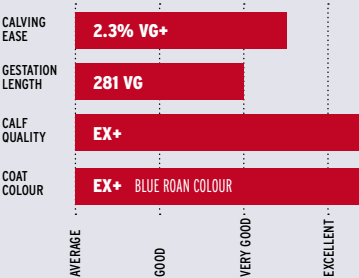

BRITISH BLUE

NORBRECK AGILE DE LA PRAULE

EAR TAG: BE8-57807693

- Semex best BB bull for calf quality.
- Average calf size with RAPID growth rates.
