"We have been very impressed by Titanic daughters. They show a nice combination of dairyness, spring of rib, and will to work. Rear udders are wide and high with a silky texture and a very strong median suspensory ligament. Fore attachment is attached smoothly to the body and teat placement is close to ideal. They walk on very good feet with a slight

tendency to be straight. Rump structure is adequate with a good thurl placement. Titanic will mate well on Gibson, Cousteau, Igniter, Inquirer, Aeroline, Stoneham, Leader, Rubens and James daughters."

- Steve Laroche
